TYPES OF PROTECTIVE GLOVES

**Leader's Guide, Fact Sheet
& Quiz**

Item Number: 5165
© AP Safety Training

This easy-to-use Leader's Guide is provided to assist in conducting a successful presentation.

PREPARING FOR THE MEETING

Here are a few suggestions for using this program:

- a) Review the contents of the Fact Sheet that immediately follows this page to familiarize yourself with the program topic and the training points discussed in the program. The Fact Sheet also includes a list of Program Objectives that details the information that participants should learn from watching the program.
- b) If required by your organization, make an attendance record to be signed by each participant to document the training to be conducted.
- c) Prepare the area and equipment to be used for the training. Make sure the watching environment is comfortable and free from outside distractions. Also, ensure that participants can see and hear the TV screen or computer monitor without obstructions.
- d) Make copies of the Review Quiz included at the end of this Leader's Guide to be completed by participants at the conclusion of the presentation. Be aware that the page containing the answers to the quiz comes before the quiz itself, which is on the final page.

CONDUCTING THE PRESENTATION

- a) Begin the meeting by welcoming the participants. Introduce yourself and give each person an opportunity to become acquainted if there are new people joining the training session.
- b) Introduce the program by its title and explain to participants what they are expected to learn as stated in the Program Objectives of the Fact Sheet.
- c) Play the program without interruption. Upon completion, lead discussions about your organization's specific policies regarding the subject matter. Make sure to note any unique hazards associated with the program's topic that participants may encounter while performing their job duties at your facility.
- d) Hand out copies of the review quiz to all of the participants and make sure each one completes it before concluding the training session.

5165 TYPES OF PROTECTIVE GLOVES FACT SHEET

LENGTH: 1:41 MINUTES

PROGRAM SYNOPSIS:

Our hands are exposed to countless workplace hazards that can cause severe injuries: machinery that can pinch or crush, knives and sharp tools that can cut or puncture, corrosive or irritating chemicals, extreme heat or cold and ergonomic-related hazards. Hand, wrist and finger injuries often have severe consequences such as extended time away from work and physical rehabilitation. Fortunately, most hand injuries can be prevented by following safe work practices and wearing appropriate PPE. This program provides an overview of the various types of protective gloves that can protect our hands against workplace hazards.

PROGRAM OBJECTIVES:

After watching the program, the participant should be able to explain the following:

- Which types of protective gloves protect against specific workplace hazards;
- Where to find information about gloves required for specific chemicals;
- What types of specialized gloves are available.

INSTRUCTIONAL CONTENT:

TYPES OF PROTECTIVE GLOVES

- Protective gloves can protect our hands against various workplace hazards, but it's important to wear the proper glove for the job because there is no one glove that provides effective protection for all tasks.
- Cloth gloves can protect our hands from minor hazards and help prevent scrapes, scratches, blisters and rashes.
- Heavy leather gloves are good for handling materials with sharp edges, burrs, splintering wood and similar objects that present both cutting and puncture hazards.
- Various types of cut-resistant gloves and cut-resistant sleeves are available for handling sharp objects such as sheet metal and also provide protection while cutting with knives.
- When working with chemicals, you can refer to section eight of the substance's Safety Data Sheet to see which type of rubber, vinyl or neoprene glove is required to protect against the chemical's hazards.
- Other types of specialized gloves include aluminized gloves to protect against intense heat, di-electric voltage rated gloves to prevent electric shock and disposable rubber, latex or plastic gloves used to protect against exposure to bloodborne pathogens or other contagions.
- It's important to select the correct glove for the job, inspect gloves before use, change gloves as the type of work changes and understand that no gloves should be worn at all when working near rotating parts or in-running nip points.

TYPES OF PROTECTIVE GLOVES

ANSWERS TO THE REVIEW QUIZ

1. a

2. b

3. b

TYPES OF PROTECTIVE GLOVES
REVIEW QUIZ

Name _____ Date _____

The following questions are provided to determine how well you understand the information presented in this program.

1. There is no one work glove that provides effective protection for all tasks.
 - a. True
 - b. False

2. When working with chemicals, you can refer to _____ of the substance's Safety Data Sheet to see which type of glove is required.
 - a. Section 4
 - b. Section 8
 - c. Section 12

3. Only tight-fitting gloves should be worn when working near rotating parts or in-running nip points.
 - a. True
 - b. False
